# Is the H1N1 Swine Flu Vaccine Safe?

FONT SIZE A A A

## H1N1 Swine Flu Vaccine Safety: Hype, Myths, and Facts

By Daniel J. DeNoon
WebMD Feature

Reviewed by Louise Chang, MD

What do we really know about the 2009 H1N1 swine flu vaccine? What do we really not know?

Questions about the safety of the vaccine persist. Surf the Internet or flip through TV stations and you'll encounter a multitude of myths and a whole lot of hype.

What are the facts? Straightforward answers follow these questions:

- **Is the 2009 H1N1 swine flu vaccine safe?**
- **Isn't the 2009 H1N1 swine flu vaccine too new to trust?**
- **Why should I believe what government scientists say about swine flu?**
- **Does the H1N1 swine flu vaccine contain thimerosal?**
- **The 1976 swine flu vaccine wasn't safe. Why should I trust this one?**
- **Do we really know what drugmakers are putting in the swine flu vaccine?**

### Is the 2009 H1N1 swine flu vaccine safe?

No vaccine is 100% safe for everyone. People with allergies to eggs, for example, can't take flu vaccines because eggs are involved in the manufacturing process.

# Big Brother Rears its Head: Will Use H1N1 Vaccine to Implant Nanochips and Control Population

In 2005 I wrote a letter to several media outlets and websites entitled: "Big Brother Gets Under Your Skin." In that letter archived on this site I described microchipping technology in 1997 , when the 'Digital Angel' was developed by Verichip Corp, and since that time many animals and groups of people have been successfully implanted with microchips.

Think of microchips as senders and receivers of messages, just as your RFID chipped credit card or your passport, identify you and your personal information. Actually the new bank credit cards that are 'chipped' send out a constant signal, which can be picked up by *chip readers* at a distance of 20 feet. Today, when you enter some retail stores a reader at the entrance can pick up your information. The days of anonymity are over.

**This Site is Dedicated to Yahuah** יהוה

You are worthy, O Lord, to receive glory and honour and power: for You have created all things, and for Your pleasure they are and were created. Revelation 4

Click on hyperlinks for scripture relevant information throughout the entire website

***The H1N1 vaccine is full of poisons (documented here) that are designed to disable and kill you. This is one of the aspects of the war on the Saints in Revelation 13:7 which coincides with the New Age plan of "cleansing" and Agenda 21, the United Nation's depopulation agenda presently being carried out by WHO - the World Health Organization.***

***There IS a microchip small enough to fit on the end of a needle that IS capable of behavioral and physiological control. (see articles below). And Revelation chapter 9 could very well be describing a vaccination program.***

***Resorting to preconceived notions, man's religious arguments or dismissing this warning will cost you your life and your soul. Take the time to read and consider all the information here, pray about it and find out what it is you are to do. Ask Yahuah for the truth in all things. We are told to seek Him, not man.***

*And I beheld another beast coming up out of the earth; and he had two horns like a lamb, and he spoke as a dragon. (Revelation 13:11)*

*And he causes all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name. Here is wisdom. Let him that has understanding count the number of the beast: for it is the number of a man; and his number is Six hundred threescore and six. (Revelation 13: 16 - 18)*

*And the third angel followed them, saying with a loud voice, If any man worship the beast and his image, and receive his mark in his forehead, or in his hand, The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy*

# Lies, Half-Truths and Manipulations

**A Hathor Planetary Message through Tom Kenyon**

We wish to speak with you about a dangerous and treacherous passage that you are now entering. We spoke to this in our last communication when we discussed Chaotic Nodes.

From our perspective you are getting closer to the manifestation of such chaos.

There are several reasons for this, which we wish to explore. But first we wish to affirm to you our belief in the sovereignty of human consciousness. We believe that you can, as individuals and as a collective, change your destinies, even as they unfold before you.

Therefore this message is not one of doom, but a call to presence and spiritual mastery.

As we view it, the H1N1 Virus, commonly called the "swine flu" has been genetically engineered and created. It is not a natural mutation. It is a conscious attempt by the hidden forces behind your governments to control and manipulate you. It is a social experiment, with dire consequences if they succeed.

The lies, half-truths and manipulations of information concerning this virus are very convoluted. But whatever the outcome, it is clear to us that this was initiated by human consciousness.

And it is also clear to us that it can only be undone by human consciousness. Fear of

# Project Panorama

Panorama intends to solve these problems but also has a *hidden* agenda

- libraries are allowed to provide paper copies of licensed material to anyone,
  but commercial publishers do not (yet) allow digital delivery of such material to external users,
  because they have no insight into this market,
  and consequently have no business model how to charge libraries for such services
- Panorama can provide this missing insight and therefore act as a crowbar to breach the old license model

# Project Panorama

## the ultimate solution ?

Panorama should offer a search system

- whic[no initial tariff barrier]one
- cont[no deceptive information] validated information
- with[as easy to use as google]earch & find
- that [understandable information]retrieved information in its proper context
- and [no final tariff barrier]ate way to obtain the full content of licensed information items *(articles)*

# Project Panorama

this high level of ambition
required a feasibility study
to be performed first

"Actually, I'm still on life support.
I just came by to do a feasibility study."

# need & pertinence

interviews with limited number of key stakeholders:

- no unanimous support for idea
- different types of users require different solutions
- people (should) use their online social network
- selecting results requires more support than search itself
- only about diseases people want to know "everything"
- some information must be interpreted or translated to specific user context

simultaneous government report on public library sector:

- integration of digital information services has high priority

# existing other projects and systems

- many exist for specific audiences, subjects or types of material
- two general ones did not take-off (Wikia, ReferenceExtract)
- most use metasearch solution
- no clear picture of selection policies for resources to include

## a few interesting observations

- co-operation by entering URL's of selected sites in Delicious
- one used Google CSE as search engine
- two used automatic recommender for selective metasearch
- health related systems provided indications of level or audience

# recent new approach: "renting" articles

deepdyve BETA

# selection of resources

- establishing and applying criteria for collection development are daily practice for librarians
- established quality assessment criteria for web resources exist already
- co-operation within the scientific and the public library sectors exists and is being advocated already
- web 2.0 methods (e.g. Delicious) can support this co-operation

# two types of search solutions

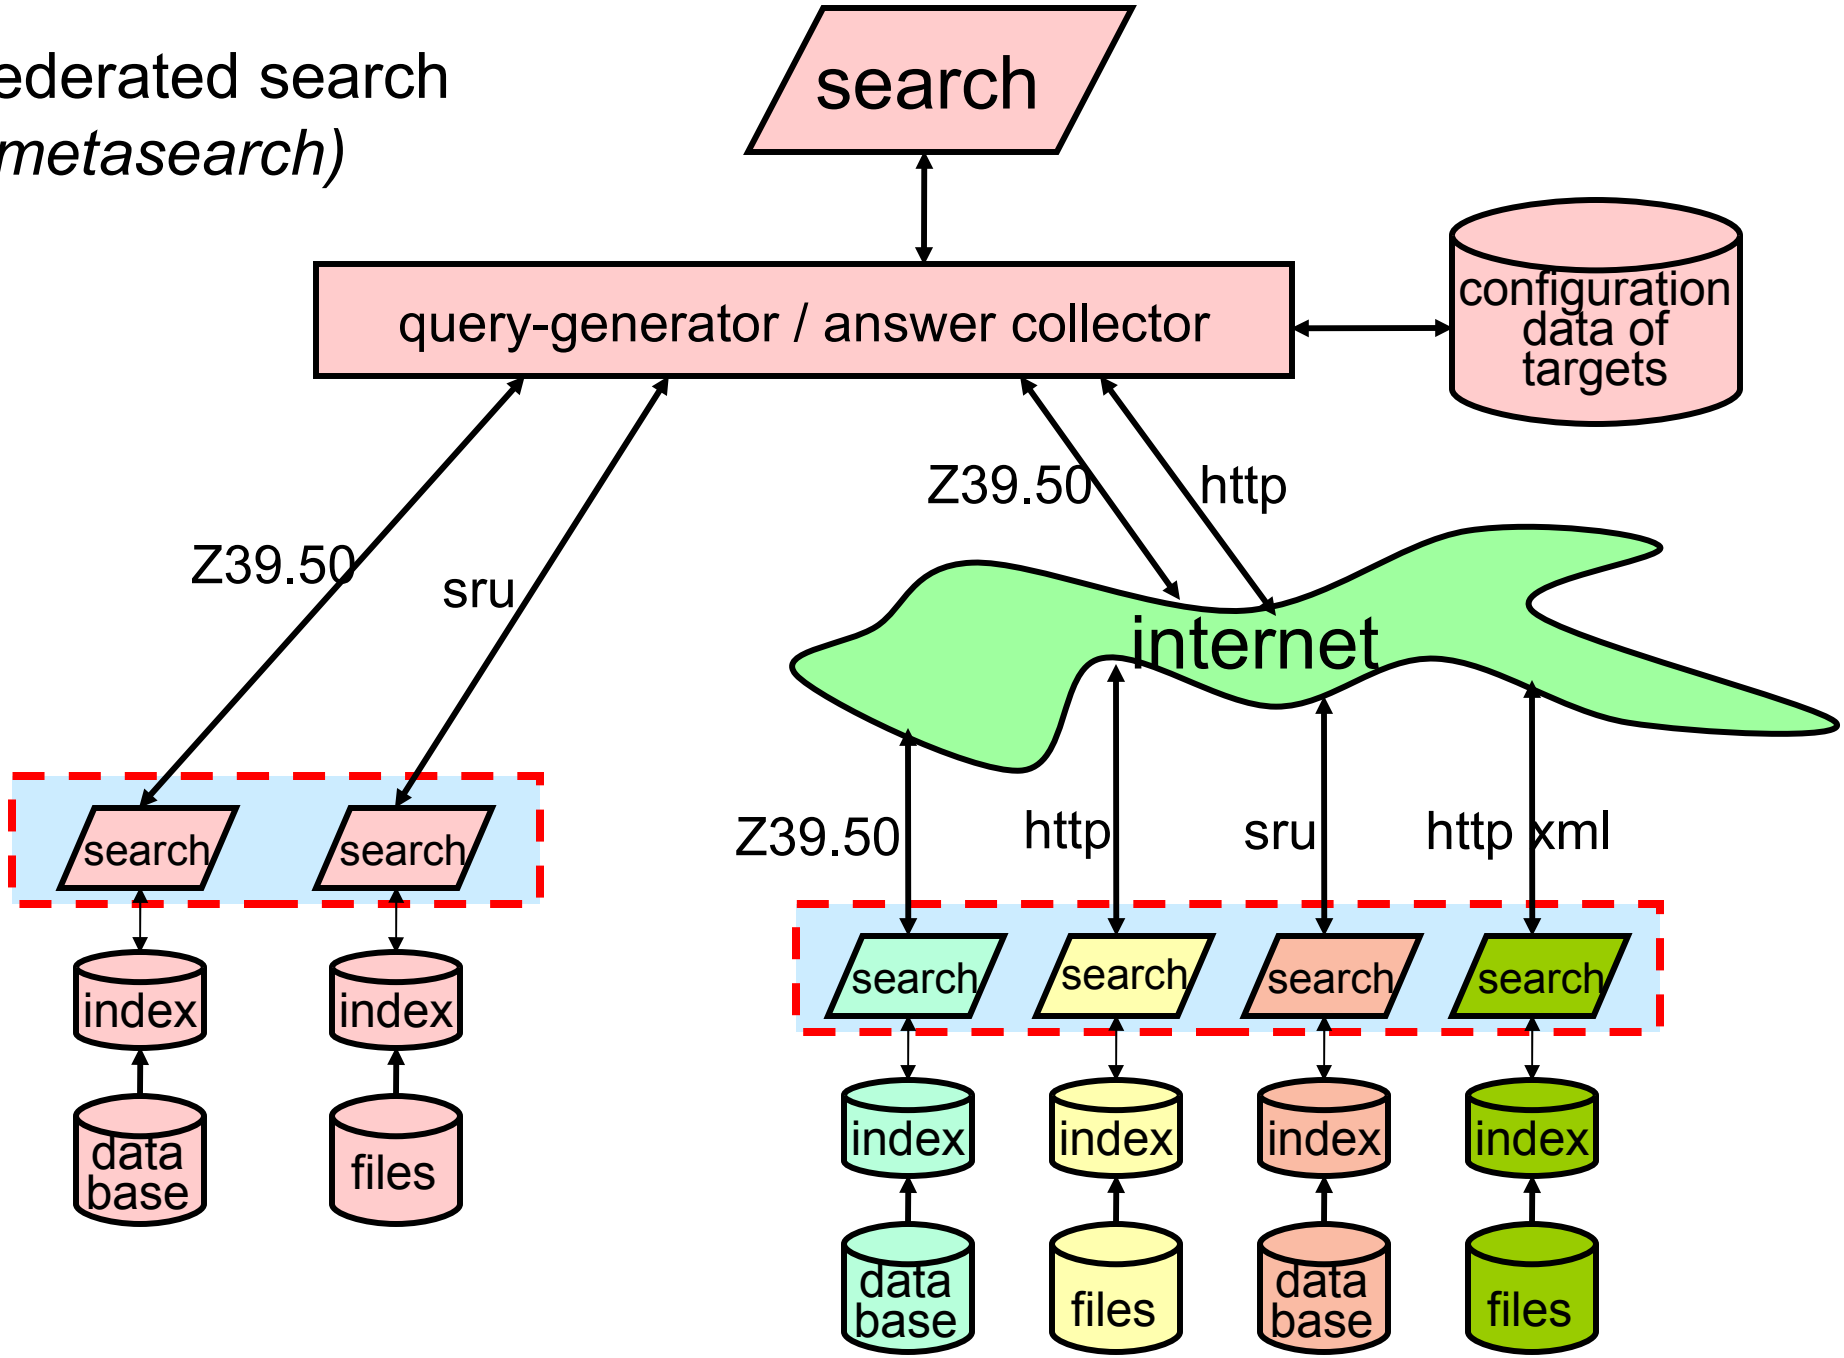
- federated search

  metasearch:
  distributes query over a number of existing (external) search systems and collects and combines their answers, "speaking the languages" of those systems

- integrated search

  has its own search engine:
  indexes the selected resources, either stored in a local repository or file-system, or located externally on the web and indexed by means of a web spider

federated search
*(metasearch)*



# two types of search solutions

What articles and documents does Omega contain?
Omega offers you access to some thousands of digital journals from various disciplines and to over 16 million digital ('full-text') articles. These articles are published by the following publishers:
Ebsco: over 1500 journals in all fields of science, also non-specialist literature. Full-text usually available from 1990 onwards
Elsevier Science Direct: over 1600 journals in various disciplines. Full-text usually available from 1995 onwards, of some journals the archive files are also available
JStor: over 450 journals in various disciplines, in particular journals on arts subjects and social sciences. Full-text available from the first volumes onwards.
SpringerLink: over 1250 journals (including the Kluwer Academic journals)
Igitur Archives: over 6,000 publications of scientists of Utrecht University
IoP: ten major journals on science subjects
ArXiv: over 335,000 publications from the ArXiv archives, especially in the disciplines of physics, mathematics, computer sciences and quantitative biology
Karger: approximately 74 especially medical journals
Oxford Journals: almost 200 journals
Highwire: over 350 journals especially in the disciplines of Medicine and Science

# two types of search solutions

| | **federated search** *(metasearch)* | trend | **integrated search** *(search engine)* |
|---|---|---|---|
| + | • no indexing effort needed<br>• easier to implement | | • can offer sophisticated functionality & user-friendliness<br>• fast<br>• allows refinement afterwards |
| – | • only common denominator of search functionality<br>• limited retrieval sophistication<br>• slow<br>• no user-friendly interfaces<br>• need preselection of resources | | • more complicated to implement and configure<br>• difficult to obtain data (or to get access to data) to be indexed |

# access to licensed information

a link is no access yet

- many users belong to organisation with "some" rights on "some" licensed resources, but not on all
- identity management system can give insight in resulting user rights on retrieved material
- geographic localisation services using GPS (or a ZIP-code) can combine to directions to most appropriate place giving locally access to full-text information
- technology like ExLibris' SFX, uses data on organisational licences to provide appropriate alternatives for full version of retrieved information *(other copies, from other suppliers, …)*

# functional requirements

- user-friendly one-stop shopping single search interface
- search engine for selected resources where search is missing
- metasearch for what can not be included in search engine
- automatic decision which components to send query to
- results from all components merged in single result list
- clustering of search results on basis of content and formal criteria
- automatic suggestions for search refinement (like Aquabrowser)
- identity management + geographic localisation + license data direct user to appropriate point for full access

more detailed requirements to be decided after further user surveys

# two recent developments

1. in 2009 Dutch public library sector was reorganised

   new institution for digital backbone of PL's started cooperation with University Libraries and National Library, focusing on an integrated search solution for physical collections **and** digital material

1. in 2009 the instigator of project Panorama (Bas Savenije) was appointed director of the Dutch National Library

   strategic plan 2010-2013 of National Library has the ambition to develop a back-office for providing digital publications to everybody, in co-operation with university & public libraries and
   expects to find a solution for license problems with publishers
   *(already without "Panorama's crowbar")*

# conclusions

- no technical obstacles to build a Panorama system
- uncertainty about the real need and viability of a single one-size-fits-all system

but:

- a Panorama system can serve as backbone infrastructure for more specific targeted services to be developed
- recent developments in the Netherlands have boosted the chance that such a national infrastructure develops,
  - even if it will not be called Panorama,
  - even if it will initially provide access to article- and book-type material only

# conclusions

*bottomline:*

ongoing realisation of ideas from Panorama

in a national information infrastructure

will considerably improve

information access for all
