

Errata corrige

- Page 5

par A. 2.2.2 – AAEtA

The adduct between acrylamide (AA) and ethanolamine, in molar ratio 2:1, was obtained by adding dropwise a water or alcoholic solution of EtA to a solution (in the same solvent) of MBA.

A. 2.2.3 - MBADeTA

The addition product between N,N-methylenebisacrylamide and diethanolamine (DEta), in molar ratio 1:2, was obtained with the same procedure described above.

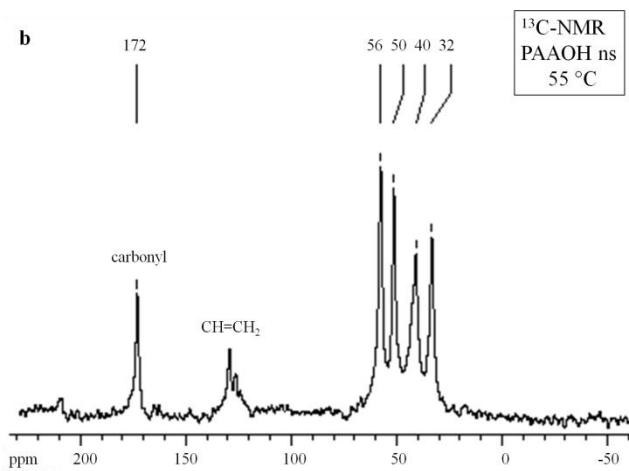

- Page 64-65

Par B. 3.1.1.1 – ESI – MS

Replace 216.6 with the correct value 215

- Page 68

Replace the figure B.20b

- Pages 95-100

Replace tables B.21 and B.22 and figures B.48(a-d) and B.50(a-d) with the following ones:

Table B.21- Results of the no-choice test for Reticulitermes lucifugus.
Av = average;

Treatment	Sample code	Starting	Mortality (%)	Attack level (0-4)	Mass Loss (%)	Survival days
PAAOHd2	P1	250	100	0	0.000	24

Fig. B.48 - (a) Level of attack; mass loss of the samples after the attack (b), mortality (c) and survival of the colonies (d). Average value \pm standard error.

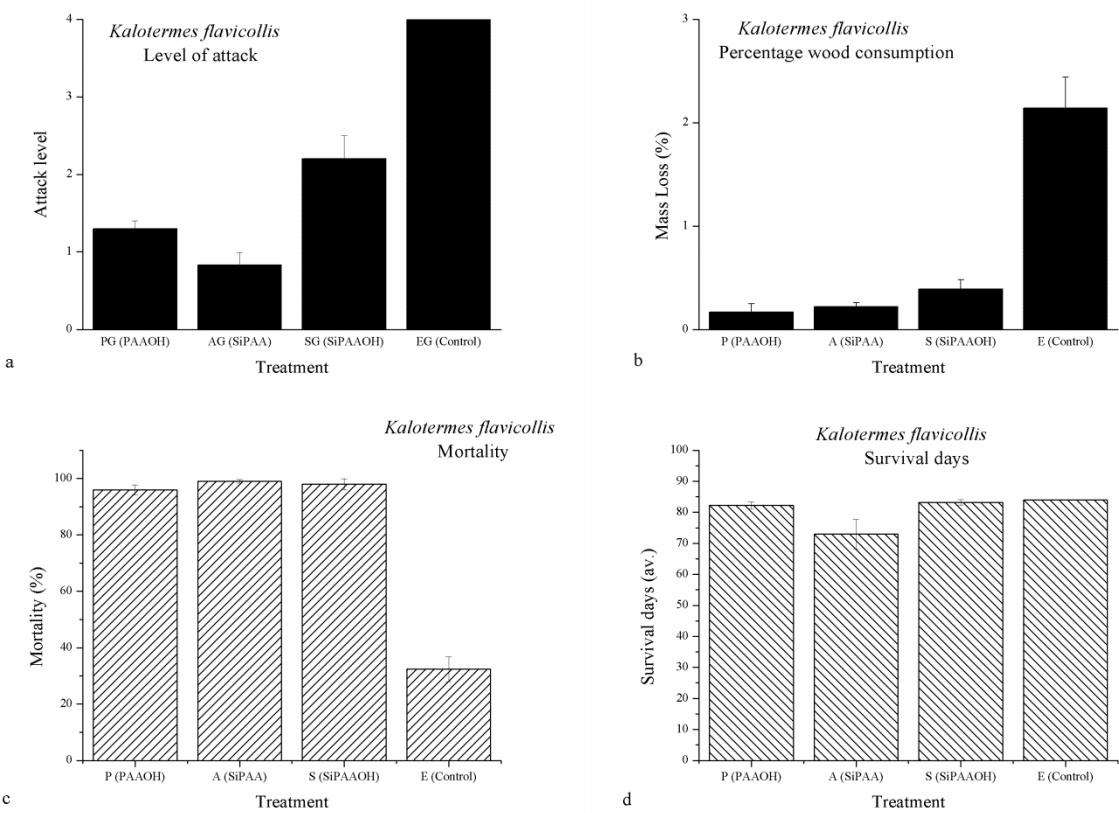

Fig. B.50 - (a) Level of attack; mass loss of the samples after the attack (b), mortality (c) and survival of the colonies (d). Average value \pm standard error.

Line 24 par B.3.3.2.1 add reference to figure B48c: In figure B.48c are reported the average values of the mortality at the end of the test.

Line 23 par B.3.3.2.2 add reference to figure B50c: In figure B.50c are reported the average values of the mortality after the test.
