

Table of Contents

Summary	p. 1
----------------	------

Chapter 1

Myofibroblasts Induce Ectopic Activity in Cardiac Tissue

State of the art

Fibroblasts: physiological phenotype	p. 8
Myofibroblasts: physiopathological phenotype	p. 10
Arrhythmias and the role of (myo)fibroblasts	p. 12
Ectopic Activity	p. 14
Mechanisms by which myofibroblasts could evoke Ectopic Activity	p. 15
Figures	p. 17

Materials and methods

Primary cell cultures of cardiomyocytes	p. 24
Hybrid cell preparations	p. 24
Conditioned medium experiments	p. 25
Optical recording of electrical activity	p. 25

Immunocytochemistry and determination of myofibroblast and HeLa cell density	p. 26
Whole cell current clamp	p. 27
Myofibroblast density vs. maximal diastolic potentials	p. 29
Figures	p. 29
Results and discussion	p. 33

Chapter 2

Temporal variability of repolarization in rat ventricular myocytes paced with time-varying frequencies

State of the art

Action potential generation by a single cardiac cell	p. 45
Main currents in the Ventricular action potential of rat	p. 47
Spatial dispersion of the rat ventricular repolarization	p. 47
Effect of the pacing rate on the APD	p. 48
Electrical restitution	p. 50
Beat-to-beat variability of APD ₉₀ in isolated myocytes	p. 52

Relation between the cardiac electric activity recorded on the
body surface (ECG) and in the single cells (action potential) p. 53

Figures p. 55

Materials and methods

Cell isolation p. 67

Solutions p. 67

Electrical recordings p. 68

Statistics p. 72

Figures p. 73

Results and discussion p. 74

Conclusions and future developments p. 96

Appendix

*Anode break excitation in rat and guinea pig
ventricular cardiomyocytes*

Summary p. 99

State of the art

Tissue based explanation of anodal stimulation	p. 101
Membrane currents at hyperpolarized potentials	p. 102
Hypothesis	p. 102
Cellular explanation of Anode break excitation	p. 102
Figures	p. 106

Materials and methods

Cell isolation	p. 114
Solutions	p. 114
Electrical recordings	p. 115
Figures	p. 117

Results and discussion

p. 122

Conclusions and future developments

p. 135
